

# solid panel 实竹板

MOSO solid panel is a visually appealing board product that consists of multiple layers of bamboo, available in multiple variations with respect to size, thickness, configuration, style and colour. These bamboo panels are especially interesting in those applications where the side of the panel remains visible, such as steps of a staircase, furniture and kitchen work tops. MOSO实竹板是一种视觉效果非常吸引人的板材，它由多层竹材组成，可用于大小，厚度，配置，款式和颜色等的不同选择。这些竹板因为侧面结构的可见常被用于例如楼梯的台阶，家具和厨房工作台面等。

## application 应用

- Attention: before pressing the panels both glue surfaces have to be sanded to create an optimal adhesion between the panels. This is especially important for cold pressing where multiple panels are piled and pressed at the same time.

- Advised room conditions: temperature approx. 20°C. Air humidity 50-65%.

- The MOSO solid panels always have one exposed side and one backside. The backside generally contains more colour variation than the exposed side.

- The inner layers of MOSO solid panels consist of multiple, separated segments, which can lead to some small voids in these layers. These voids have to be filled when finishing the panel. This is done to optimize the stability of the panels. The middle layers of the 3m and 4m panels can contain segments which have been connected by fingerjoints.

注意：在压制面板之前，两个涂胶面需先砂光以便于在两面板之间创造最佳粘合度。

这对于多个面板堆积并同时压制的冷压是尤为重要的。

建议室内适宜条件：温度约20℃。空气湿度50-65%。

MOSO实竹板有正反面，通常反面会有一些色差存在。

MOSO实竹板的包含多层结构，在这些结构层中会存在一些小的空隙。油漆之前需要把这些空隙用腻子补好，这样可以增加材料的稳定性。

3m和4m板材的上层有指接板。
